ABOUT THE COMPANY

Frascold manufactures over 70,000 screw and reciprocating compressors a year. Our 53,000 m² factory outside of Milan (Italy) houses our advanced engineering, manufacturing and testing facilities. More than 200 employees work in the Headquarters and in the Subsidiaries based in the United States, China and India, with distribution partners and service centers in 86 countries.

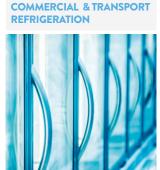

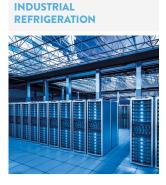

More than 85 years ago Frascold was born as a small family owned Company developing solutions in refrigeration and conditioning industry. Today we invest more and more in people, products, technologies and services aiming to become the best partner for our Customers and the touchstone for the market.

TWO-STAGE RECIPROCATING COMPRESSORS

Frascold two-stage compressors models S 2V and 2Z, have been redesigned and reengineered by eliminating external conduits for interstage circuitry and including an additional liquid injection system.

MAIN FEATURES

Thanks to the elimination of external conduits, the compressor features reduced dimensions.

Reliable & Sturdy

The new specially designed components make the compressor resistant to all operating conditions within its working range.

Sub-cooler Kit

All models can be fitted with a pre-assembled sub-cooler that can be provided installed and connected or supplied separately.

Optimized Liquid Injection

The compressed gas and injected liquid mixing process is instantaneous and the liquid is not overheated as it does not go through the motor.

Exclusive motor Cooling System

The motor is injected solely with the exact amount of fluid required to cool the motor. This system, only available on Frascold compressors, prevents the formation of ice on the motor by eliminating damage by oxidation, by condensate in the electrical box and liquid slugging.

Increased Efficiency

Special bearings have been designed with a cage that helps reduce noise levels and increase the load coefficient and their operating life.

Silent Operation

Thanks to the dual liquid injection, purposely designed to optimize the operation of the compressor to achieve maximum performance.

CONFORMITY DECLARATION

Frascold Two-stage reciprocating compressors are intended for installation in refrigeration systems. The machine or partly completed machines shall comply with local safety regulation and standards of the place of installation (within the EU according to the EU Directives 2006/42/EC Machinery Directive, 2014/68/UE Pressure Equipment, 2006/95/EC Low Voltage Directive). They may be put into operation only if the compressor has been installed in accordance with these assembly instructions.

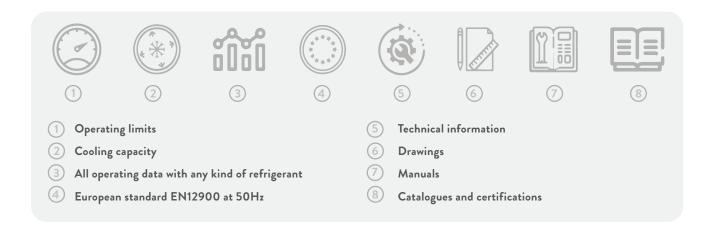

Commissioning is only possible if the entire system into which it is integrated has been inspected and approved in accordance to the previsions of legal regulations.

The Manufacturer Declaration describes the standards to be applied.

The Manufacturer Declaration of incorporation, according to the 2006/42/EC, is available at: www.frascold.it, documentation, manufacturer's declaration.

PERFORMANCE DATA FSS3 SOFTWARE

Please refer to our FSS3 to check performances of all our compressors.

ASERCOM CERTIFICATION

ASERCOM (Association of European Refrigeration Component Manufacturers) promotes standards for safety and performance ratings in the refrigeration industry. ASERCOM certification means that a compressor's performance has been determined to meet the specifications stated by its manufacturer.

Manufacturer's performance data for a particular compressor model and refrigerant are submitted to ASERCOM for certification. To ensure objectivity, members of the certification committee are selected from competing manufacturers. If the committee agrees with the submitted performance data that model is added to the certified list.

Models from the certified list are regularly tested to verify performance. To ensure fairness, the compressor to be tested is obtained from a distributor's stock and tested at a competitor's facility. If test results are not up to the listed specifications that model is removed from the certified list.

Frascold stands behind the quality, performance and reliability of all of our products. We currently have 108 ASERCOM certified models and more on the way. All of our compressors are run tested at the factory and carry a standard 2 year warranty.

^{2.} Only with direct control

MOTOR COOLING SYSTEM

Here are the features of the device:

Constant and accurate control of the motor temperature

The system accurately and constantly checks the temperature via the AMS sensors located inside the windings. Indeed, the position of the sensors has been specifically designed to identify the most critical areas in terms of overheating, thereby allowing to protect the motor also during the critical start-up stage.

Efficient motor cooling

The system identifies when the pre-alarm temperature threshold is reached and activates the injection of liquid in the motor according to optimized amounts and time.

Compressor reliability

The controlled cooling of the motor prevents excessive cooling on neighboring areas, eliminating the risk of frost and resulting oxidation, thereby preventing the formation of condensation in the electrical box of the compressor and the risk of a short circuit.

Prevention of motor overheating

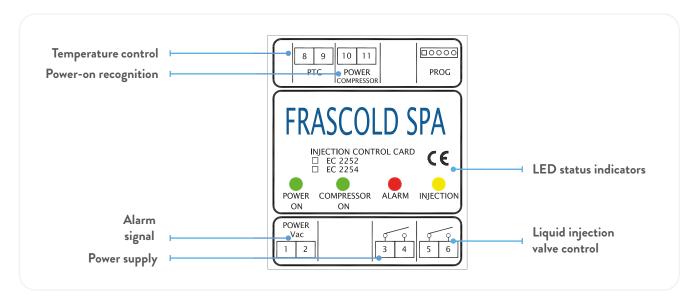

The system identifies when the critical temperature threshold has been reached and stops the compressor in the event of anomalous overheating.

Liquid injection monitoring

Thanks to the TA (Current transducer used as power ON Sensor) device installed as standard, as well as injecting the liquid as required, the system can prevent this function when the compressor stops due to a malfunction of the compressor itself or due to external system management logics.

The ICC module is supplied as standard and is already fully wired inside the electrical box.

Injection Control Card

CONTROL AND PROTECTION DEVICE INT69® DIAGNOSE AND INT69 TML® DIAGNOSE

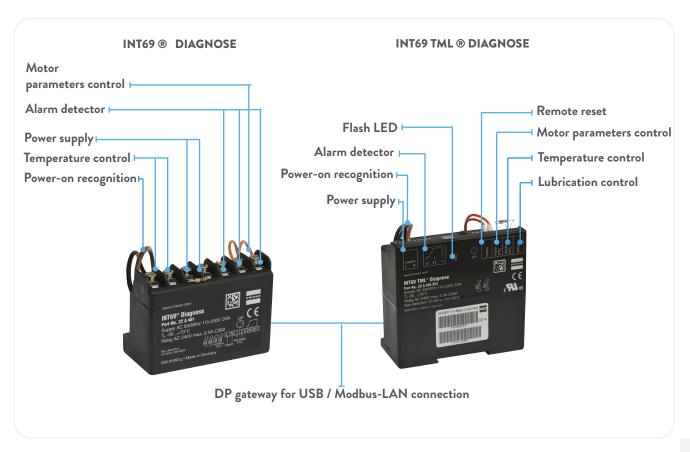

Kriwan Diagnose devices are a further development of compressors' protection units. The Diagnose technology is not only limited to protecting the compressor, but also offers diagnosis and system optimization features; providing detailed information to technicians in order to promptly diagnose any plant problems; it even makes it possible to prevent malfunctioning before it occurs thanks to data analysis.

The additional protection features help to extend the compressor's service life. Through this technology applied to compressors, users will benefit from enhanced reliability of the cooling system and from the reduction in running and maintenance costs. Frascold was the first compressor manufacturer to adopt this innovative technology and today it is standard on all our compressors.

Advantages:

- Guaranteed optimal operation throughout the compressor's entire life cycle.
- · Convenient and with straightforward operation.
- Instantaneous diagnosis and precise problem-solving in case of error or fault.
- · Specifically adapted to the user's needs.
- Intelligent monitoring of compressor operation.
- It extends the operative life of cooling systems.
- Improves compressor protection.
- · Reduces running and maintenance costs.
- Automatic storage of operative data and errors in memory.
- Technical card with the retrieval of stored data.
- Display of compressor status through flash LED code.
- Data download through the USB connection.
- Remote communication through Modbus-Gateway and LAN-Gateway protocol.
- Also applicable to previously installed compressors.
